Protocol Title: Specified Gas Emitters Regulation – Quantification Protocol for Wind-Powered Electricity Generation Protocol Date: March 2008	Project Title: Soderglen Windfarm Project

This is to confirm the Alberta Emissions Offset Registry (AEOR) has completed the requested removal of emission reductions from the **Soderglen Windfarm Project as submitted by Nexen Inc.**

Total serialized tonnes for this project for

- 2006 has **changed** from **16,666 tCO_{2e}** to **16,050 tCO_{2e}** (*removal of 16 tCO_{2e}*)
- 2007 has **changed** from **105,713 tCO_{2e}** to **105,608 tCO_{2e}** (*removal of 105 tCO_{2e}*)

The reason for removal is due to emissions from fuel used in the operation and maintenance of the facility (project emissions), in accordance with the Alberta Environment Quantification Protocol for Wind-Powered Electricity Generation Version 1.0 (March 2008), were not originally quantified. The application of the *National Inventory Report* 2006 factor of 0.93 kg CO_{2e}/kWhh to electricity imported for operation of the windfarm during no-wind periods and operation of the office facility in Fort MacLeod result in this removal.
